

# **Cignal Reporter Assay Kit**

## **RARE Reporter Assay Kit**

**Cat. no. 336841 CCS-016L**

### **For study of pathway activity**

The Cignal RARE Reporter Assay Kit is designed to monitor the activity of retinoic acid receptor-activated signal transduction pathways in cultured cells. The RARE receptor is a mixture of an inducible retinoic acid receptor (RAR)-responsive luciferase construct and a constitutively expressing Renilla construct (40:1). The RAR-responsive luciferase construct encodes the firefly luciferase reporter gene under the control of a minimal (m)CMV promoter and tandem repeats of the Retinoic Acid Response Element (RARE). We have experimentally optimized the number of response elements as well as the intervening sequence between response elements to maximize the signal to noise ratio. The constitutively expressing Renilla construct encodes the Renilla luciferase reporter gene under the control of a CMV immediately early enhancer/promoter and acts as an internal control for normalizing transfection efficiencies and monitoring cell viability. Using a simple dual-luciferase assay, you can easily monitor the activity of RAR-mediated signaling pathways and determine the effect of various treatments, such as gene knockdown, over-expression, and chemical compounds on those pathways.

For further details, consult the *Cignal Reporter Assay Handbook*.

### **Shipping and storage**

The Cignal Reporter Assay Kit is shipped on dry ice or blue ice. Store at -20°C. When stored under these conditions, this product can be used for 6 months from the date of receipt without reduction in performance.

**Note:** Open the package and store the products appropriately immediately on receipt.

### **Performance data**
