

Cignal Reporter Assay Kit

TCF/LEF Reporter Assay Kit (GFP)

Cat. no. 336841 CCS-018G

For study of pathway activity

The Cignal TCF/LEF Reporter Assay Kit is designed to monitor the activity of the Wnt signal transduction pathway in cultured cells. The Wnt signaling pathway leads to the dephosphorylation, stabilization, and nuclear translocation of β -catenin. The stabilized β -catenin binds to TCF/LEF transcription factors, leading to the activation of Wnt-responsive genes. The TCF/LEF reporter expresses the Monster GFP reporter gene upon activation of the Wnt signal transduction pathway. We have experimentally optimized the number of response elements as well as the intervening sequence between response elements to maximize the signal to noise ratio.. Using a simple GFP assay, you can easily monitor the activity of Wnt signaling pathways and determine the effect of various treatments, such as gene knockdown, over-expression, and chemical compounds on those pathways.

For further details, consult the *Cignal Reporter Assay Handbook*.

Shipping and storage

The Cignal Reporter Assay Kit is shipped on dry ice or blue ice. Store at -20°C . When stored under these conditions, this product can be used for 6 months from the date of receipt without reduction in performance.

Note: Open the package and store the products appropriately immediately on receipt.
