

QIAseq™ Immune Repertoire RNA Library Kit T-Cell Receptor (12)

Cat. no. 333705

**IMHS-001Z-12
IMMM-001Z-12**

**For constructing Targeted RNAseq libraries for T-cell receptor
alpha, beta, gamma & delta**

The QIAseq Immune Repertoire RNA Library Kit integrates unique molecular index (UMI) technology into a gene-specific, single primer extension (SPE)-based target enrichment process. This kit enables sensitive detection of the human or mouse T-cell receptor alpha, beta, gamma and delta V(D)J region, include the CDR1, CDR2 and CDR3 regions.

By using UMIs, the QIAseq Immune Repertoire RNA Library Kit Panel eliminates PCR duplicates, and minimizes sequencing artifacts that may arise during the library preparation process or during the sequencing run. This ensures accurate and unbiased quantification of the number of molecules captured and sequenced.

For further details, consult the QIAseq Immune Repertoire RNA Library Handbook.

Shipping and storage

QIAseq Immune Repertoire RNA Library Kit are shipped in two boxes: box 1 of 2 is shipped on dry ice and box 2 of 2 is shipped on gel pack. For long-term storage, keep the contents of box 1 at -20°C and the contents of box 2 at 4°C. If stored under these conditions, the panels are stable for 6 months after receipt.

Note: Open the package and store the products appropriately immediately upon receipt.
