For lncRNA expression analysis by pathway and disease using laboratory-verified SYBR[®] Green qPCR assays

Format	For use with the following real-time cyclers
RT ² lncRNA PCR Array, Format R	Rotor-Gene Q, other Rotor-Gene cyclers

Description

The Human Cancer PathwayFinder RT² lncRNA PCR Array profiles the expression of 84 long noncoding RNAs (lncRNAs) differentially expressed in tumors versus normal tissue. This array provides cancer researchers with a convenient and accurate way to quickly analyze the lncRNAs most relevant to tumorigenesis discovered to date. These lncRNAs have been carefully selected based on results published in peer-reviewed journals that suggest a correlation with the diagnosis, staging, progression, or prognosis of various cancers or tumors. In some cases, lncRNAs were also chosen based either on their association with cancer-related miRNA predicted with bioinformatics or on their proximity in the genome to key oncogenes and tumor suppressor genes. The profiling results from this array may yield insights into the molecular mechanisms behind the pathogenesis of many cancers or tumor types. A set of controls present on this array enables data analysis using the delta-delta CT method of relative quantification, assessment of reverse transcription performance, and assessment of PCR performance. Using SYBR Green real-time PCR, the expression of a focused panel of lncRNAs related to cancer research can be easily and reliably analyzed with this RT² lncRNA PCR Array.

For further details, consult the *RT² lncRNA PCR Array Handbook*.

Shipping and storage

RT² lncRNA PCR Arrays in formats A, C, D, E, F, G, and R are shipped at ambient temperature, on dry ice, or on blue ice packs, depending on destination and accompanying products. RT² lncRNA PCR Arrays in format H are shipped on dry ice or blue ice packs.

For long term storage, keep plates at -20°C .

Note: Ensure that you have the correct RT² lncRNA PCR Array format for your real-time cycler (see table above).

Note: Open the package and store the products appropriately immediately on receipt.

Array layout

The 96 real-time assays in the Rotor-Gene format are located in wells 1–96 of the Rotor-Disc™ (plate A1–A12=Rotor-Disc 1–12, plate B1–B12=Rotor-Disc 13–24, etc.). To maintain data analysis compatibility, wells 97–100 do not contain real-time assays but will contain master mix to account for weight balance.
