Description

The Human Parkinson's Disease RT² Profiler™ PCR Array profiles the expression of 84 key genes directly or potentially involved in Parkinson's disease (PD). PD is a neurodegenerative disorder caused by loss of dopaminergic neurons. Although there are inheritable genetic forms of PD, the majority of diagnoses are sporadic PD, where the cause is unknown. Gene expression microarray analyses of multiple PD animal models have shed insight into the mechanism of PD initiation and progression. For example, one microarray study shows that genes of the PARK family, central to inheritable PD, are also dysregulated in patients diagnosed with sporadic PD. In addition, this study identifies dysregulated genes involved in ion transport, such as ATP2B2. Therefore, PD research focuses on both known mutated genes, such as Alpha-synuclein (SNCA) and Parkin (PARK2), as well as novel genes identified from microarray experiments. This array includes known PD genes and their interactors, as well as genes whose expression changes across multiple human, mouse, rat and macaque PD microarray analyses. These genes mediate multiple cellular functions dysregulated in PD, such as ubiquitination, ion transport, apoptosis and dopaminergic signaling. Using real-time PCR, you can easily and reliably analyze the expression of a focused panel of genes involved in Parkinson's disease progression with this array.

For further details, consult the *RT² Profiler PCR Array Handbook*.

Shipping and storage

RT² Profiler PCR Arrays in formats A, C, D, E, F, and G are shipped at ambient temperature, on dry ice, or blue ice packs depending on destination and accompanying products. RT² Profiler PCR Arrays in format H are shipped on dry ice or blue ice packs.

For long term storage, keep plates at –20°C.

Note: Ensure that you have the correct RT² Profiler PCR Array format for your real-time cycler (see table above).

Note: Open the package and store the products appropriately immediately on receipt.

Array layout (96-well)

For 384-well 4 x 96 PCR arrays, genes are present in a staggered format. Refer to the *RT² Profiler PCR Array Handbook* for layout.
