

RT² Profiler PCR Array (96-Well Format and 384-Well [4 x 96] Format)

Human Osmotic Stress

Cat. no. 330231 PAHS-151ZA

For pathway expression analysis

Format	For use with the following real-time cyclers
RT ² Profiler PCR Array, Format A	Applied Biosystems® models 5700, 7000, 7300, 7500, 7700, 7900HT, ViiA™ 7 (96-well block); Bio-Rad® models iCycler®, iQ™ 5, MyiQ™, MyiQ2; Bio-Rad/MJ Research Chromo4™; Eppendorf® Mastercycler® ep realplex models 2, 2s, 4, 4s; Stratagene® models Mx3005P®, Mx3000P®; Takara TP-800
RT ² Profiler PCR Array, Format C	Applied Biosystems models 7500 (Fast block), 7900HT (Fast block), StepOnePlus™, ViiA 7 (Fast block)
RT ² Profiler PCR Array, Format D	Bio-Rad CFX96™; Bio-Rad/MJ Research models DNA Engine Opticon®, DNA Engine Opticon 2; Stratagene Mx4000®
RT ² Profiler PCR Array, Format E	Applied Biosystems models 7900HT (384-well block), ViiA 7 (384-well block); Bio-Rad CFX384™
RT ² Profiler PCR Array, Format F	Roche® LightCycler® 480 (96-well block)
RT ² Profiler PCR Array, Format G	Roche LightCycler 480 (384-well block)
RT ² Profiler PCR Array, Format H	Fluidigm® BioMark™

Sample & Assay Technologies

Description

The Human Osmotic Stress RT² Profiler PCR Array profiles the expression of 84 key genes involved in the cellular response to changes in osmolarity. Under normal physiological conditions, the majority of mammalian cells grow within an isotonic environment. The renal medulla, one exception to this rule, experiences not only high osmolarity during urine concentration (>10-fold normal levels), but also a broad range of potential salt concentrations at any given time. Osmolarity changes affect the expression of hundreds of genes driven by the key transcription factor TonEBP/OREBP (NFAT5). During osmotic stress, expression of water transporters, ion transport genes, and protein chaperones increases. Cells also undergo cytoskeletal rearrangement. Other typical cellular effects include oxidative stress, cell cycle arrest, transcription/translation arrest, and mitochondrial depolarization, all of which can result in DNA damage and apoptosis. In cellular systems other than the kidney medulla, a general electrolyte imbalance can lead to chronic hyponatremia and central pontine myelinolysis, a rare disease occurring in the central nervous system and involving some of the same transporters commonly expressed in the kidney medulla. This array includes molecular transporters, direct NFAT5 targets, and hormones and receptors involved in the hyperosmotic response. Genes whose expression is commonly altered during osmotic stress are also included. Using real-time PCR, research studies can easily and reliably analyze the expression of a focused panel of genes involved in osmotic stress with this array.

For further details, consult the *RT² Profiler PCR Array Handbook*.

Shipping and storage

RT² Profiler PCR Arrays in formats A, C, D, E, F, and G are shipped at ambient temperature, on dry ice, or blue ice packs depending on destination and accompanying products. RT² Profiler PCR Arrays in format H are shipped on dry ice or blue ice packs.

For long term storage, keep plates at –20°C.

Note: Ensure that you have the correct RT² Profiler PCR Array format for your real-time cycler (see table above).

Note: Open the package and store the products appropriately immediately on receipt.

Array layout (96-well)

For 384-well 4 x 96 PCR arrays, genes are present in a staggered format. Refer to the *RT² Profiler PCR Array Handbook* for layout.
