RT² Profiler PCR Array (Rotor-Gene® Format) Human TGFb Signaling Targets

Cat. no. 330231 PAHS-235ZR

For pathway expression analysis

Format	For use with the following real-time cyclers		
RT ² Profiler PCR Array,	Rotor-Gene Q, other Rotor-Gene cyclers		
Format R			

Description

The Human TGFB Signaling Targets RT2 Profiler PCR Array profiles the expression of 84 key genes responsive to TGFB signal transduction. The TGFB superfamily comprises 4 signaling pathways: TGFB, Bone Morphogenic Protein (BMP), Activin, and Nodal. These pathways regulate multiple cellular processes, such as development and differentiation, cellular proliferation and migration, apoptosis, and cell cycle regulation. Pathway stimulation by TGFB ligands (TGFBs, BMPs, Growth Differentiation Factors, and others) activate the SMAD transcription factors, which translocate into the nucleus to interact with additional transcription factors and activate specific target genes. Dysregulation of the TGFB signal transduction pathway is associated with diseases such as fibrosis or cancer. Hundreds of TGFB target genes have been identified using experimental techniques such as expression studies and chromatin immunoprecipitation (ChIP) as well as bioinformatic analysis of predicted transcription factor binding sites. This array includes TGFB signaling transcription factors and highly relevant target genes identified by multiple studies. Results obtained with this array can be used to analyze activation or inhibition of TGFB signaling. Using real-time PCR, research studies can easily and reliably analyze the expression of a focused panel of genes involved in TGFB-related cellular processes with this array.

For further details, consult the RT² Profiler PCR Array Handbook.

Shipping and storage

RT² Profiler PCR Arrays in the Rotor-Gene format are shipped at ambient temperature, on dry ice, or blue ice packs depending on destination and accompanying products.

For long term storage, keep plates at -20°C.

Note: Ensure that you have the correct RT² Profiler PCR Array format for your real-time cycler (see table above).

Note: Open the package and store the products appropriately immediately on receipt.

Array layout

The 96 real-time assays in the Rotor-Gene format are located in wells 1–96 of the Rotor-Disc[™] (plate A1–A12=Rotor-Disc 1–12, plate B1–B12=Rotor-Disc 13–24, etc.). To maintain data analysis compatibility, wells 97–100 do not contain real-time assays but will contain master mix to account for weight balance.
