Description

The Human miR-4514 & miR-4692 Targets RT² Profiler PCR Array profiles the expression of 84 hsa-miR-4514 and hsa-miR-4692 target genes. This panel includes bioinformatically predicted target genes regulated by hsa-miR-4514 and hsa-miR-4692 with the highest context scores and expressed in the widest variety of cell and tissue types. The target genes would also be predicted to be regulated by any other yet to be discovered miRNAs that would have the same seed sequence as hsa-miR-4514 and hsa-miR-4692. miRNA target gene expression analysis provides further insight into the function of these specific miRNAs. Using real-time PCR, research studies can easily and reliably analyze the expression of a focused panel of genes likely to be regulated by hsa-miR-4514 and hsa-miR-4692 with this array.

For further details, consult the *RT² Profiler PCR Array Handbook*.

Shipping and storage

RT² Profiler PCR Arrays in the Rotor-Gene format are shipped at ambient temperature, on dry ice, or blue ice packs depending on destination and accompanying products.

For long term storage, keep plates at –20°C.

Note: Ensure that you have the correct RT² Profiler PCR Array format for your real-time cycler (see table above).

Note: Open the package and store the products appropriately immediately on receipt.

Array layout

The 96 real-time assays in the Rotor-Gene format are located in wells 1–96 of the Rotor-Disc™ (plate A1–A12=Rotor-Disc 1–12, plate B1–B12=Rotor-Disc 13–24, etc.). To maintain data analysis compatibility, wells 97–100 do not contain real-time assays but will contain master mix to account for weight balance.
