RT² Profiler PCR Array (Rotor-Gene® Format)

Mouse Estrogen Receptor Signaling

Cat. no. 330231 PAMM-005ZR

For pathway expression analysis

Format	For use with the following real-time cyclers
RT² Profiler PCR Array, Format R	Rotor-Gene Q, other Rotor-Gene cyclers

Description

The Mouse Estrogen Receptor Signaling RT² Profiler PCR Array profiles the expression of 84 key genes involved in estrogen receptor (ER) activation and response. Estrogen receptors are steroid hormone receptors important in development, growth, and reproduction. The 2 well-characterized ERs, alpha and beta, interact with a variety of co-regulators in the nucleus and initiate target gene transcription. ERs can also associate with the cell membrane, where they activate downstream signaling pathways. ERs play a large role in female organ cancers, especially breast cancer. The mechanisms of ER signaling are not entirely understood since tissue-specific ER responses vary depending on the agonist or antagonist. ER signaling is important in mammalian systems other than female organs. For example, ERs are involved in neurological development, and estrogens play a protective role against cardiovascular disease and osteoporosis, although the exact mechanisms of these processes are under investigation. This array includes the ERs, their co-regulators and interacting proteins, and downstream target genes. Results obtained with this array can yield insights into ER mechanisms and responses. Using real-time PCR, research studies can easily and reliably analyze the expression of a focused panel of genes involved in estrogenic signaling with this array.

For further details, consult the *RT² Profiler PCR Array Handbook*.

Shipping and storage

RT² Profiler PCR Arrays in the Rotor-Gene format are shipped at ambient temperature, on dry ice, or blue ice packs depending on destination and accompanying products.

For long term storage, keep plates at –20°C.

Note: Ensure that you have the correct RT² Profiler PCR Array format for your real-time cycler (see table above).

Note: Open the package and store the products appropriately immediately on receipt.

Array layout

The 96 real-time assays in the Rotor-Gene format are located in wells 1–96 of the Rotor-Disc™ (plate A1–A12=Rotor-Disc 1–12, plate B1–B12=Rotor-Disc 13–24, etc.). To maintain data analysis compatibility, wells 97–100 do not contain real-time assays but will contain master mix to account for weight balance.

Gene table: RT² Profiler PCR Array

Position	UniGene	GenBank	Symbol	Description
A01	Mm.298908	NM_001008533	Adora1	Adenosine A1 receptor
A02	Mm.341377	NM_013464	Ahr	Aryl-hydrocarbon receptor
A03	Mm.2969	NM_009648	Akap1	A kinase (PRKA) anchor protein 1
A04	Mm.38469	NM_009685	Apbb1	Amyloid beta (A4) precursor protein-binding, family B, member 1
