## Description

The Mouse Glycosylation RT<sup>2</sup> Profiler PCR Array profiles the expression of 84 key genes encoding enzymes that post-translationally add and remove sugar residues to and from proteoglycans and glycoproteins. The process of generating and altering mature N-linked and O-linked glycans essential for proteoglycan and glycoprotein function requires not only glycosyltransferase activity for de novo oligosaccharide synthesis, but also both glycosidase and glycosyltransferase activity for remodeling. Increased expression of cell surface and secreted proteins, whether by stimulation of cells to differentiate or proliferate or by exogenous over-expression, requires more glycosyltransferase and glycosidase activity, contributed at least in part by their own increased gene expression. This array includes glycosyltransferase and glycosidase genes for several important sugars: galactose, glucose, mannose, N-acetylgalactosamine, N-acetylglucosamine, fucose, and sialic acid. Some of the represented enzymes also act on glycosphingolipids. Using real-time PCR, you can easily and reliably analyze the expression of a focused panel of genes involved in protein glycosylation with this array.

For further details, consult the *RT<sup>2</sup> Profiler PCR Array Handbook*.

## Shipping and storage

RT<sup>2</sup> Profiler PCR Arrays in formats A, C, D, E, F, and G are shipped at ambient temperature, on dry ice, or blue ice packs depending on destination and accompanying products. RT<sup>2</sup> Profiler PCR Arrays in format H are shipped on dry ice or blue ice packs.

For long term storage, keep plates at  $-20^{\circ}\text{C}$ .

**Note:** Ensure that you have the correct RT<sup>2</sup> Profiler PCR Array format for your real-time cycler (see table above).

**Note:** Open the package and store the products appropriately immediately on receipt.

## Array layout (96-well)

For 384-well 4 x 96 PCR arrays, genes are present in a staggered format. Refer to the *RT<sup>2</sup> Profiler PCR Array Handbook* for layout.
