

# RT<sup>2</sup> Profiler PCR Array (Rotor-Gene® Format)

## Mouse Nephrotoxicity

Cat. no. 330231 PAMM-094ZR

For pathway expression analysis

Format	For use with the following real-time cyclers
RT <sup>2</sup> Profiler PCR Array, Format R	Rotor-Gene Q, other Rotor-Gene cyclers

### Description

The Mouse Nephrotoxicity RT<sup>2</sup> Profiler PCR Array profiles the expression of 84 key genes implicated as potential biomarkers of kidney toxicity. Minimizing toxicity remains one of the major barriers to bringing a drug to market. The crucial role of the kidney in drug excretion makes it one of the major organs evoking drug-related toxic responses and an important target of toxicological studies. Genes that consistently exhibit increased or decreased expression during these toxic responses in model systems serve as markers to predict potential adverse clinical outcomes. Kidney excretion within the nephron starts with blood filtration by the glomerulus. The filtrate then moves through the proximal tubule (for re-absorption of important compounds), the loop of Henle (for urine concentration), the distal tubule, and finally the collecting duct (for urine concentration and removal). Drug-induced nephrotoxicity research focuses on proximal tubule toxicity, where the majority of drug metabolite re-absorption occurs. The array includes genes that show expression differences when exposed to a wide variety of known nephrotoxic drugs. The organization of genes by their predicted direction of expression change eases data analysis. Using real-time PCR, you can easily and reliably analyze the expression of a focused panel of genes involved in nephrotoxic response with this array.

For further details, consult the *RT<sup>2</sup> Profiler PCR Array Handbook*.

### Shipping and storage

RT<sup>2</sup> Profiler PCR Arrays in the Rotor-Gene format are shipped at ambient temperature, on dry ice, or blue ice packs depending on destination and accompanying products.

For long term storage, keep plates at –20°C.

---

**Note:** Ensure that you have the correct RT<sup>2</sup> Profiler PCR Array format for your real-time cycler (see table above).

**Note:** Open the package and store the products appropriately immediately on receipt.

## Array layout

The 96 real-time assays in the Rotor-Gene format are located in wells 1–96 of the Rotor-Disc™ (plate A1–A12=Rotor-Disc 1–12, plate B1–B12=Rotor-Disc 13–24, etc.). To maintain data analysis compatibility, wells 97–100 do not contain real-time assays but will contain master mix to account for weight balance.
