

# RT<sup>2</sup> Profiler PCR Array (Rotor-Gene® Format)

## Mouse Liver Cancer

Cat. no. 330231 PAMM-133ZR

### For pathway expression analysis

Format	For use with the following real-time cyclers
RT <sup>2</sup> Profiler PCR Array, Format R	Rotor-Gene Q, other Rotor-Gene cyclers

### Description

The Mouse Liver Cancer RT<sup>2</sup> Profiler PCR Array profiles the expression of 84 key genes involved in the progression of hepatocellular carcinoma (HCC), as well as other forms of hepatocarcinogenesis. HCC is a common form of liver cancer with a poor prognosis and low survival rate, and its incidence is on the rise. Underlying liver diseases or infections are potential oncogenic mechanisms involving chronic immune and inflammatory responses. However, the link between disease or infection and carcinogenesis is currently nebulous and a focus of intensive research. Microarray studies have identified many dysregulated genes, and many are important for cellular signaling and other normal biological processes. Research directed at these genes may yield insights into the molecular mechanisms behind hepatic oncogenesis. This array includes genes commonly up- and down-regulated in HCC, genes involved in commonly altered signal transduction pathways, and genes involved in other dysregulated biological pathways such as epithelial to mesenchymal transition, cell cycle, apoptosis, and inflammation. Using realtime PCR, your research study can easily and reliably analyze the expression of a focused panel of genes involved in HCC initiation with this array.

For further details, consult the *RT<sup>2</sup> Profiler PCR Array Handbook*.

### Shipping and storage

RT<sup>2</sup> Profiler PCR Arrays in the Rotor-Gene format are shipped at ambient temperature, on dry ice, or blue ice packs depending on destination and accompanying products.

For long term storage, keep plates at –20°C.

**Note:** Ensure that you have the correct RT<sup>2</sup> Profiler PCR Array format for your real-time

cycler (see table above).

**Note:** Open the package and store the products appropriately immediately on receipt.

## Array layout

The 96 real-time assays in the Rotor-Gene format are located in wells 1–96 of the Rotor-Disc™ (plate A1–A12=Rotor-Disc 1–12, plate B1–B12=Rotor-Disc 13–24, etc.). To maintain data analysis compatibility, wells 97–100 do not contain real-time assays but will contain master mix to account for weight balance.
