

RT² Profiler PCR Array (Rotor-Gene[®] Format)

Mouse Cancer Drug Targets

Cat. no. 330231 PAMM-507ZR

For pathway expression analysis

Format	For use with the following real-time cyclers
RT ² Profiler PCR Array, Format R	Rotor-Gene Q, other Rotor-Gene cyclers

Description

The Mouse Cancer Drug Targets RT² Profiler PCR Array profiles the expression of 84 actively sought targets for anticancer therapeutics and drug development. Cancer is a heterogeneous disease with a variety of survival mechanisms resulting from accumulated mutations that alter gene expression. In one of its key roles, cancer research continually identifies novel dysregulated carcinogenesis-related genes elucidating new mechanisms of cancer progression or treatment evasion, and potentially leading to new avenues for drug development. Further research into the expression of these genes may identify how and when they are dysregulated and potentially discover the underlying mechanism(s) behind cancer growth and progression. This array includes genes dysregulated during carcinogenesis, including those involved in key cellular growth pathways such as apoptosis, DNA damage repair, epigenetics, and growth factor and other signaling pathways. Using real-time PCR, your research study can easily and reliably analyze the expression of a focused panel of genes involved in oncogenesis with this array.

For further details, consult the *RT² Profiler PCR Array Handbook*.

Shipping and storage

RT² Profiler PCR Arrays in the Rotor-Gene format are shipped at ambient temperature, on dry ice, or blue ice packs depending on destination and accompanying products.

For long term storage, keep plates at -20°C.

Note: Ensure that you have the correct RT² Profiler PCR Array format for your real-time cycler (see table above).

Note: Open the package and store the products appropriately immediately on receipt.

Array layout

The 96 real-time assays in the Rotor-Gene format are located in wells 1–96 of the Rotor-Disc™ (plate A1–A12=Rotor-Disc 1–12, plate B1–B12=Rotor-Disc 13–24, etc.). To maintain data analysis compatibility, wells 97–100 do not contain real-time assays but will contain master mix to account for weight balance.
