

RT² Profiler PCR Array (Rotor-Gene® Format)

Rhesus Macaque Insulin Signaling Pathway

Cat. no. 330231 PAQQ-030ZR

For pathway expression analysis

Format	For use with the following real-time cyclers
RT ² Profiler PCR Array, Format R	Rotor-Gene Q, other Rotor-Gene cyclers

Description

The Rhesus Macaque Insulin Signaling Pathway RT² Profiler PCR Array profiles the expression of 84 genes related to insulin-responsive genes. This array represents genes associated with the insulin receptor and target genes for insulin signaling. Genes involved in the metabolism of carbohydrates, lipids, and proteins and other related biological responses are also included. This array contains members of the PI3K and MAPK Pathways as well. Using realtime PCR, you can easily and reliably analyze expression of a focused panel of insulin-responsive genes with this array.

For further details, consult the *RT² Profiler PCR Array Handbook*.

Shipping and storage

RT² Profiler PCR Arrays in the Rotor-Gene format are shipped at ambient temperature, on dry ice, or blue ice packs depending on destination and accompanying products.

For long term storage, keep plates at –20°C.

Note: Ensure that you have the correct RT² Profiler PCR Array format for your real-time cycler (see table above).

Note: Open the package and store the products appropriately immediately on receipt.

Sample & Assay Technologies

Array layout

The 96 real-time assays in the Rotor-Gene format are located in wells 1–96 of the Rotor-Disc™ (plate A1–A12=Rotor-Disc 1–12, plate B1–B12=Rotor-Disc 13–24, etc.). To maintain data analysis compatibility, wells 97–100 do not contain real-time assays but will contain master mix to account for weight balance.
