

RT² Profiler PCR Array (Rotor-Gene® Format)

Rat Homeobox (HOX) Genes

Cat. no. 330231 PARN-083ZR

For pathway expression analysis

Format	For use with the following real-time cyclers
RT ² Profiler PCR Array, Format R	Rotor-Gene Q, other Rotor-Gene cyclers

Description

The Rat Homeobox (HOX) Genes RT² Profiler PCR Array profiles the expression of 84 HOX genes involved in multicellular organismal development. HOX genes encode a group of homeodomain-containing transcription factors, which were initially described as controlling segmental patterning during development. Recently, their importance has been reemphasized by stem cell and cancer researches. Although these HOX genes have been grouped according to their established roles in multicellular organismal development, their true function in your cellular systems is waiting to be discovered by you. Using real-time PCR, you can easily and reliably analyze expression of a focused panel of HOX genes with this array.

For further details, consult the *RT² Profiler PCR Array Handbook*.

Shipping and storage

RT² Profiler PCR Arrays in the Rotor-Gene format are shipped at ambient temperature, on dry ice, or blue ice packs depending on destination and accompanying products.

For long term storage, keep plates at –20°C.

Note: Ensure that you have the correct RT² Profiler PCR Array format for your real-time cycler (see table above).

Note: Open the package and store the products appropriately immediately on receipt.

Sample & Assay Technologies

Array layout

The 96 real-time assays in the Rotor-Gene format are located in wells 1–96 of the Rotor-Disc™ (plate A1–A12=Rotor-Disc 1–12, plate B1–B12=Rotor-Disc 13–24, etc.). To maintain data analysis compatibility, wells 97–100 do not contain real-time assays but will contain master mix to account for weight balance.

Gene table: RT² Profiler PCR Array
