RT² Profiler PCR Array (Rotor-Gene® Format) Rat Notch Signaling Targets

Cat. no. 330231 PARN-259ZR

For pathway expression analysis

Format	For use with the following real-time cyclers		
RT ² Profiler PCR Array,	Rotor-Gene Q, other Rotor-Gene cyclers		
Format R			

Description

The Rat Notch Signaling Targets RT² Profiler PCR Array profiles the expression of 84 key genes regulated by the Notch pathway. Notch signaling is a conserved developmental pathway involved in cell-cell communication, cell fate, apoptosis, and development. The pathway was originally discovered in Drosophila melanogaster, and mammalian homologs were identified later. Ligands from the Delta and Jagged/Serrate families activate the Notch membrane-bound receptors, inducing cleavage of the Notch intracellular domain. This intracellular domain interacts with the RBPJ family of transcription factors as well as a variety of coactivators and corepressors to initiate target gene transcription. The output of Notch signaling activation depends on the cellular context, and the proper timing and spatial regulation of its activation is crucial for normal embryonic developmental processes. Dysregulation of Notch signaling processes can lead to cancer as well as genetic developmental disorders. Many Notch pathway target genes have been identified using experimental techniques such as chromatin immunoprecipitation (ChIP) and gene expression studies. This array includes Notch signaling pathway transcription factors and highly relevant target genes identified by multiple studies. Results obtained with this array can be used to analyze activation or inhibition of Notch signaling. Using real-time PCR, research studies can easily and reliably analyze the expression of a focused panel of genes regulated by Notch signaling with this array.

For further details, consult the RT² Profiler PCR Array Handbook.

Shipping and storage

RT² Profiler PCR Arrays in the Rotor-Gene format are shipped at ambient temperature, on

dry ice, or blue ice packs depending on destination and accompanying products.

For long term storage, keep plates at –20°C.

Note: Ensure that you have the correct RT² Profiler PCR Array format for your real-time cycler (see table above).

Note: Open the package and store the products appropriately immediately on receipt.

Sample & Assay Technologies

Array layout

The 96 real-time assays in the Rotor-Gene format are located in wells 1–96 of the Rotor-Disc[™] (plate A1–A12=Rotor-Disc 1–12, plate B1–B12=Rotor-Disc 13–24, etc.). To maintain data analysis compatibility, wells 97–100 do not contain real-time assays but will contain master mix to account for weight balance.
