Description

The Mouse Cardiovascular Disease V2 miRCURY LNA™ miRNA Focus PCR Panel profiles the expression of 84 miRNAs known to exhibit altered expression during cardiovascular disease and development. This array provides researchers with a convenient way to quickly analyze the miRNAs most relevant to heart disease. Recent studies have established that miRNAs are crucial for the development and proper functioning of the heart. The heart expresses unique miRNAs regulated by cardiogenic transcription factors. During cardiovascular disease, the normal pattern of miRNA expression changes significantly and distinct patterns of miRNA expression appear to correlate with specific cardiovascular disorders. Deregulation of miRNA expression has been demonstrated in acute myocardial infarction (AMI or heart attack), cardiac hypertrophy, and cardiomyopathies, signifying the important role of miRNAs in heart disease. This array profiles miRNAs that are differentially regulated during cardiovascular disease, as identified by microarray, real-time RT-PCR, and deep sequencing expression profiling studies involving a broad spectrum of cardiovascular disease model systems, clinical samples, and cell lines. The profiling results from this array may yield insights into the molecular mechanisms behind the pathogenesis of heart disease. A set of controls present on this array enables data analysis using the $\Delta\Delta CT$ method of relative quantification, assessment of reverse transcription performance, and assessment of PCR performance. Using SYBR Green real-time PCR, the expression of a focused panel of miRNAs related to cardiovascular disease can be easily and reliably analyzed with this miRCURY LNA™ miRNA Focus PCR Panel.

Important

The miRCURY LNA™ miRNA PCR Panels are Ready-to-Use and designed for optimal performance with the miRCURY LNA RT Kit and the miRCURY LNA SYBR® Green PCR Kit. The performance of the primer sets will be affected when used in combination with less than optimal reagents. Use the miRCURY LNA miRNA PCR Panel Handbook for experiment setup. RNA work requires specific handling and precautions should be taken to prevent RNase contamination and degradation of the RNA sample and reagents.

Shipping and storage

The Ready-to-Use miRCURY LNA miRNA PCR Panels are shipped at room temperature and can be stored at 4°C for at least 6 months. For long term storage, it is recommended to place the panels at -20°C. Under these conditions, the LNA PCR primers are stable for at least 6 months after receipt.

Intended use

miRCURY LNA miRNA PCR Assays are intended for molecular biology applications. This product is not intended for the diagnosis, prevention or treatment of a disease.

Safety information

When working with chemicals, always wear a suitable lab coat, disposable gloves, and protective goggles. For more information, please consult the appropriate safety data sheets (SDSs). These are available online in convenient and compact PDF format at **www.qiagen.com/safety** where you can find, view and print the SDS for each QIAGEN kit and kit component.

For up-to-date licensing information and product-specific disclaimers, see the respective QIAGEN kit handbook or user manual. QIAGEN kit handbooks and user manuals are available at www.qiagen.com or can be requested from QIAGEN Technical Services or your local distributor.
