Description

The Rat Neurological Development & Disease miRCURY LNA™ miRNA Focus PCR Panel profiles the expression of 84 miRNAs differentially expressed during neuronal development or the progression of neurological diseases. This array provides neuroscience researchers with a convenient way to analyze the miRNAs most relevant to normal nervous system development and/or psychiatric and neurodegenerative disorder progression. Certain miRNAs, such as miR-9, promote neurodevelopment processes such as neurogenesis and synaptic plasticity. Microarray analyses of diseased brain tissues show a variety of significantly dysregulated miRNAs. However, few of these analyses have yet to focus on individual miRNA function and mechanism of action during specific disease processes. The profiling results from this array can serve as a useful marker for neuronal differentiation processes and may yield insights into the molecular mechanisms behind the pathogenesis of neurological disorders. The results can also help enhance basic neurological research since dysregulated developmental processes can lead to neurological diseases, and both often involve similar miRNA-regulated biological pathways. A set of controls present on this array enables data analysis using the $\Delta\Delta CT$ method of relative quantification, assessment of reverse transcription performance, and assessment of PCR performance. Using SYBR Green-based real-time PCR, the expression of a focused panel of miRNAs related to neurological research can be easily and reliably analyzed with this miRCURY LNA™ miRNA Focus PCR Panel.

Important

The miRCURY LNA™ miRNA PCR Panels are Ready-to-Use and designed for optimal performance with the miRCURY LNA RT Kit and the miRCURY LNA SYBR® Green PCR Kit. The performance of the primer sets will be affected when used in combination with less than optimal reagents. Use the miRCURY LNA miRNA PCR Panel Handbook for experiment setup. RNA work requires specific handling and precautions should be taken to prevent RNase contamination and degradation of the RNA sample and reagents.

Shipping and storage

The Ready-to-Use miRCURY LNA miRNA PCR Panels are shipped at room temperature and can be stored at 4°C for at least 6 months. For long term storage, it is recommended to place the panels at -20°C. Under these conditions, the LNA PCR primers are stable for at least 6 months after receipt.

Intended use
